## Stopping Brake Noise is a Snap with the NU-LOK Piston Cushion from NUCAP

August 11, 2009

Email Print 0 Comments Tweet Like 0

If you are after quiet, squeal-free brakes, then the NU-LOK Piston Cushion could be one of the most valuable products you will ever use. Taking technicians less than 6 seconds to install, the rubber coated NU-LOK Piston Cushion simply snaps into the caliper piston and acts as a noise-dampening buffer by absorbing movement between the piston surface and the brake pad.

NU-LOK | PISTON CUSHION  
WWW.PISTONCUSHION.COM

"As with all NUCAP products, our main objective with the Piston Cushion was to improve the way a brake system operates," says Gerry Roy, vice president of product development, NUCAP Industries. "However, instead of improving an existing technology, NUCAP created something revolutionary, a never-before-seen product that both lowers operating temperatures and reduces noise."

The NU-LOK Piston Cushion has been proven in independent tests by Greening Laboratories and Link Engineering to reduce brake noise by up to 90%, while simultaneously lowering operating temperatures up to 60% longer than brake systems that are not equipped with the Piston Cushion.

Available in sizes to fit every type of vehicle, and designed with three layers of high-tolerance steel and nitrile rubber, the Piston Cushion is an effective, low-cost solution that helps technicians stop brake noise and, in the end, stop customer comebacks as well.

To see the independent test results, to learn more about how the NU-LOK Piston Cushion can help you eliminate brake noise, or to place an order, visit [www.pistoncushion.com](http://www.pistoncushion.com).
